- About [5]

We are committed to providing high-quality educational resources for our clinicians. Simulation training is recognised as an extremely useful teaching method and has become commonplace in many specialties.

In the Thames Valley we offer a number of clinical simulation resources. We are committed to providing high-quality educational resources for our clinicians.

Simulation training is recognised as an extremely useful teaching method and has become commonplace in many specialties. We have also developed a 'Clinical Simulation Scenarios [7]' library, comprising 137 detailed scenarios, split into the following eight categories:

1. Anaesthetics [8]
2. Core Medicine [9]
3. Surgery [10]
5. General Practice [12]
6. Paediatrics [13]
7. Psychiatry [14]

Scenarios include links to areas of the relevant curriculum and provide clear instructions for faculty and ?in-scenario personnel? to follow.

Scenarios have been designed in order to focus on aspects of clinical care that are often challenging for clinicians, for example, difficult conversations, clinical emergencies and technical skills.

We collaborate with other interested bodies, and permits copying, distribution and derivation of content within the 'Clinical Simulation Scenarios' library in accordance with Creative Commons License [16].
