

Better Training Better Care (BTBC) TOP TIPS through the lens of the pilot project

These Top Tips have been derived from the lessons that were learnt throughout the projects and will hopefully give you an insight into what has worked well, and areas that can be improved.

Delirium & dementia, a smartphone app to improve cognitive assessment

1. Project Management

- This project is relatively easy to implement as the Confusion app has already been developed and is free to download for smartphones and tablets. It will require just one person to administer and coordinate activities

2. Multi-professional Engagement and Project Ambassadors

- Initial engagement will be with the Director of Medical Education at your Trust
- Engage with your IT department as they can assist with the download of the app.
- Engage Doctors in training grades for this project.
- For dissemination, work with your Trust Communications Department to spread the knowledge of this app.

3. Understanding Trust's Internal and External Factors

- This app can also be introduced to other professions who carry out cognitive assessments.

4. Academic Involvement

- Involving an academic partner into this project will assist with the measurement of the data pre- and post- introduction of the app for assessing the impact.
