

# NBIA Breast Radiology Fellowship

**Develop  
your career  
in breast  
radiology**

The NBIA breast radiology fellowship programme, launched in September 2019, is a unique training opportunity for aspiring breast radiologists.

Developed in collaboration with leading NHS breast units in England it:

Offers high quality standardised training in breast radiology

Challenges talented trainees to reach their full potential

Aims to develop the leaders, educators and researchers of the future.

The one-year programme enables fellows to enhance their skills in all aspects of breast imaging while they support radiology service delivery. Fellows gain core clinical experience at their host NHS Trust, which is supplemented by NBIA online resources and study blocks.

The scheme has already appointed 31 fellows from around the world. Of the 15 who have completed the programme so far, 13 have taken up permanent/substantive consultant posts.

The protected clinical sessions give you hands-on clinical experience...and the e-learning modules provide quality standardised teaching in one place. The fellowship provides all the necessary clinical skills and academic knowledge you need to work as a consultant in the future.”

**Dr Saad Khalil Chaudhry**  
Fellow 2021/22, University  
Hospitals Sussex  
NHS Foundation Trust

## Who can apply

- UK radiology trainees due to attain CCT prior to the start date of the fellowship
- UK radiologists who already hold a CCT
