Trend visualisation of the GMC Survey Indicator Scores for 2013, 2014, 2015, 2016 and 2017

Northumbria Healthcare NHS Foundation Trust

The plots above show the GMC Survey mean score values for 2013, 2014, 2015, 2016 and 2017. This report provides results of all trainee responses by the training post or department in which they were working at the time of completion and may include trainees from multiple training programmes (e.g. the O&G post report includes all trainees working within that department or post and will include not just O&G trainees but also trainees from other programmes such as Foundation or GP working in that department.). The purpose of this is to show annual trends in the mean score. The dark grey line shows the mean score given by the respondents in the described group. The pale grey line shows the national average score for the benchmark group, which used to determine the outlier status. The colour and shape of the flag shows the outlier status (if any) of the response and is described in the key.
